INSTRUCTIONS FOR RUNNING THE PRELIMINARY DEPRESSION DETECTOR WEB APPLICATION

- To install NodeJS
    1. Go to the website https://nodejs.org/en/ on your preferred browser.
    2. Choose a download option according to your system.
- To run the React application using NodeJS
    1. Open the Node.js Command Prompt in your system.
    2. Go to the directory where the react source code is kept by using the command
        cd directory_name
    3. Once you are at the desired directory,run the following command.
        npm start
        This will open your default browser and run the application on http://localhost:3000
- To run the Springboot application
    1. Open the springboot code in sts(Spring Tool Suite) or in eclipse.
       (You can use other IDEs as long as they can run a springboot application.We recommend to use Spring Tool Suite)
    2. Go to the file where main function is written and hit the right click button.
    3. Go to Run As and click on Spring Boot App as shown below.This will run the application on the embedded Tomcat server at port 8080.
